The VACOMASS® jet control valve is used for distribution and control of aeration air in wastewater treatment plants. The ROI is achieved through a combination of reduced operating costs due to the very low pressure loss of the valve in operation and process improvements due to the improved control performance.

Since its market launch in 2013 it has been successfully installed in many wastewater treatment plants around the world. Patent number DE 102013110581 is now issued and registered.
